

Green Waste Transfer Station (GWTS) Disposal Process

Situation:

On, 07/08/2018, Forest Lakes Owners Association (FLOA) & our Forest Lakes Fire Chief Rodriguez were notified that the Green Waste refuse deposits located in the GWTS site, now are required to be chipped to a 60/40% mixture. The **60%** must be comprised of totally solid natural resource wood products (ie; logs, trimmed tree branches, and stumps no larger than 12-14" trunk diameter & the root ball free of any dirt).

The **40%**, or less, must be composed of deposited pine needles. This mixture shall be created during chipping operations and then transported (removed) from our Forest Lakes GWTS location. This business requirement shall be imposed on 07/11//2018, and is effective immediately, with our US Forest Service approved contractor, Tri-Star Services, the Green Waste removal business operations. The natural green waste mixture requirement was mandated by the Nova Electric Power Plant management in Snowflake, where the Forest Lakes GWTS product is delivered.

Solution: (So we can keep our GWTS “functionally” open for all Forest Lakes appropriate users)

Effective on the GWTS opening on 07/11/2018, site attendants shall be assessing loads being delivered to our GWTS location. It may occur that depending on the type of load being delivered you shall be requested to unload your product onto either the 60% (heavy) or 40% (lite) location(s).

It is recommended that, when potential GWTS users are clearing any Forest Lakes property, you assess, depending on the volume of type product to be transported, consider transporting individual load(s) of “Heavy” product and a separate load(s) “Lite” product.

Please note that if the tree stumps are larger than the 14” diameter, as stated above, they will have to be split in half so that the chipping machine operation can consume them. Please also be aware that the GWTS operations shall not accept natural deliveries that are loaded with dirt and rocks. Those two product(s) damage and definitely would shut down chipping operations.

Since my last letter concerning Property clean-up, Thank You all for improving the large reduction of non-natural products.

“Thank You” all for your support and understanding in this operational mandated business change.
